NAYOMI VINDYA

Full-Stack Developer

nayomivindya711@gmail.com | **LinkedIn** | **GitHub** | 0763195356

PROFESSIONAL SUMMARY

High-motivating Information Technology undergraduate with strong expertise in full-stack web development, RESTful API design, and database systems. Hands-on experience in building scalable web applications using Java Spring Boot, Python, and JavaScript, alongside modern cloud deployment and containerization technologies. Adept at translating complex requirements into clean, efficient code and eager to contribute analytical problem-solving skills to a Software Engineering role.

- Java
- Python
- JavaScript
- React / Node.js
- HTML5 / CSS3
- REST API
- Spring Boot
- Chart.js
- MySQL
- MongoDB
- UI/UX Design
- Git & GitHub

PROJECT EXPERIENCE

Zero Waste - AI-Powered Surplus Food Redistribution System

GitHub Link

- Developed a centralized AI web platform connecting supermarkets with NGOs and charities to redistribute near-expiry surplus food and minimize waste.
- Implemented an AI priority smart allocation mechanism based on urgency, beneficiary location, and capacity alongside AI predictive models for surplus forecasting.
- Built real-time monitoring dashboards, QR-code collection ticketing, and an interactive chatbot assistant.

Attendance Pulse - Student Attendance & Grade Management System

GitHub Link

- Developed a full-stack web application using Java Spring Boot and MySQL to automate student attendance tracking, administrative tasks, and academic performance analysis.
- Built an interactive dashboard featuring real-time metrics, class distribution charts, attendance trend visual analytics (Chart.js), and exportable PDF reporting.
- Implemented dynamic student management with CRUD operations, real-time daily attendance tracking (Present/Late/Absent), and subject-wise exam grade tracking with auto-calculated letter grades.

BloodLink - Emergency Blood Donor Finder

GitHub Link

- Developed a full-stack emergency blood donor finder using React 18, Vite and React Router, with a Java 17 Spring Boot 3 backend and a PostgreSQL database.
- Implemented secure authentication using Spring Security and JWT, with Spring Data JPA (Hibernate) for data access and Axios for API communication.
- Built map-based donor search with Leaflet, and containerized the application using Docker, Docker Compose, and nginx.

Outage Board - System Outage & Service Status Dashboard

GitHub Link

- Developed a full-stack web application and dashboard to track and manage system outages and service statuses, with a React (Vite) frontend.
- Built a Python FastAPI backend with WebSockets for live updates, using SQLite for storage, and containerized the application with Docker.

EDUCATION

Institute of Technology University of Moratuwa — **Feb 2025 - Present**

National Diploma in Technology (Information Technology) — Final CGPA: Pending
